

Auto Carrier Car UP 29667

Want a big car for your layout? I mean a REALLY big car? The new Lionel Auto Carrier Car is for you. It is massive. The car is 24" long. The height of the car is 5". This is tall.

24 inches long

I like how the side screens show just a little of the inside of the car. The end doors have nice detail with the grab irons to open the doors. The open doors show the two level decks for pickup trucks and larger SUV's. The bottom has molded in brake structures. The "kinematic" couplers have a nice mechanical design.

End Doors closed and open

Molded in Brake assembly

Know that the car has height restrictions. Most of the older Lionel bridges are well under 5".

"kinematic" couplers

It has special die-cast operating "kinematic" couplers for close coupling on straight-aways and automatic adjusting for holding the cars tightly on curves. It is listed for O54 minimum curves.

If your railroad is ready for some BIG cars, this one comes highly recommended.

"kinematic" couplers keep cars close on curves
